- Crafty Syntax Live Help
- PHPCoin
- dotProject
- osTicket
- Squirrel Mail
- Elgg

We also do design and web programming for sites. Sites hosted with us get discounts on design and setup of 3rd party software. Check the next page for details on what you get.

- Web hosting:
 - 1GB Web Space, so you don't have to worry about all those pictures taking up all the room.
 - Unlimited bandwidth, again so you don't have to worry about your site stopping because of all those pictures

- 5 subdomains, a subdomain for each department department.mydomain.com these can be linked to the directory for the FTP accounts.
- Generic SSL server, so you can carry out secure transactions
- FTP access to the root of the site.
- 5 extra FTP accounts, can be locked to a selected directory so the user can't access other folders on the site. Great when linked to the subdomains to give users their own area.
- FTP locks, you can lock access to FTP by IP address so somebody can't change the contents of your site without your permission.
- Perl 5.8.8
- ASP 4.0.2L
- PHP 4.4.9
- PHP5 5.2.10 can be set to default script so no need to rename all your files

- Email
 - 25 Boxes, can also use the subdomains so you can have user@department.mydomain.com
 - 25 Forwards, can also use the subdomains so you can have user@department.mydomain.com
 - 25 Auto responders, These can be on both forwarders and email boxes. The message can also be changed from the webmail system.
 - Catch all forwarding, so all mail that is not an email box or forwarder will be sent to one email box.
 - Domain level catch all, so emails to whoever@mydomain.com will be sent to whoever@myotherdomain.com, great if you have two or more domain names for the same site.
 - Web Mail with an easy to remember address webmail.mydomain.com, so you can get to your mail from any computer on the internet.

- DNS:
 - Managed DNS servers for your domain name, sorry we don't do DDNS but
 - whatever.mydomain.com can be pointed to another server or even a dyndns.org name so you can always get to your machine.
 - A records for domain and subdomains
 - CNAME records for domain and subdomains
 - MX records for domain and subdomains
 - TXT support for the new SPF records

- MySQL:
 - 5.0.82 socketed servers so only the web server it's running on can access it.
 - 1 database, add 1 more for £1 per month
 - Uses web space quota.

- phpmyadmin access

All this for just £4.00 a month or get one month free for £44 a year. All options can be increased or swapped for others so you could buy an extra database or swap some of your email auto responders for extra email boxes. There is a one off setup fee for the swap services of £5. Check the Domain & Extras page for more information.
